

React JS Basic Level – Project Oriented Questions

Question 1: Student Registration Form Validation

Create a basic React JS application for **Student Registration**.

Requirements

1. Create a form with Student Name, Email, Age, and Course.
2. Use **useState** hook.
3. Validate empty fields, valid email, and age above 18.
4. Display error messages.
5. After submitting, show student details below the form.
6. Use dummy JSON data initially.

Concepts Used: useState, Form Handling, Validation, JSON Data Rendering.

Question 2: Student Search & Filter Application

Create a React JS application to manage student data using **map()** and **filter()**.

Requirements

1. Create a student array with ID, Name, and Course.
2. Display all students using **map()**.
3. Add search functionality by student name.
4. Add filter buttons: All Students, React Students, Node Students.
5. Show total number of students.
6. Display 'No Data Found' if list is empty.

Concepts Used: map(), filter(), Search Functionality, Conditional Rendering.

Question 3: Student CRUD Application with Page Navigation

Create a basic React JS Student Management System using CRUD operations and page navigation.

Requirements

1. Create Home Page, Student List Page, and Add Student Page.
2. Add new student details.
3. Display all students in card/table format.
4. Delete student from list.
5. Use react-router-dom for navigation.
6. Use useState.
7. Use components: Navbar, StudentForm, StudentList.
8. Use props to pass data between components.
9. Create responsive UI using Bootstrap.

Concepts Used: React Router, CRUD Operations, Props, useState, Component Structure.
